### Definition of Hypoglycemia

≥2 years Glucometry <4.0 mmol/L  
<2 years Glucometry <3.0 mmol/L

### Aid to Capacity Evaluation (Record Details in 'Remarks' Section)

Indicate to whom this assessment refers if not the patient [e.g., parent, or substitute decision maker (SDM)]

Patient verbalizes/communicates understanding of clinical situation? (e.g., *what is wrong with you?*) ☐ Yes ☐ No - Requires consideration of capacity

Patient verbalizes/communicates appreciation of applicable risks? (e.g., *what could happen if I don't help you?*) ☐ Yes ☐ No - Requires consideration of capacity

Patient verbalizes/communicates ability to make alternative plan for care? (e.g., *what will you do once I leave?*) ☐ Yes ☐ No - Requires consideration of capacity

Responsible adult on scene ☐ Yes ☐ No

**Refusal of Service** – I have been advised that treatment and/or transportation is available immediately. I refuse such treatment and/or transportation to hospital having been informed of the risks involved. I assume full responsibility arising out of such refusal.

**Refus de service** – On m'a avisé que je pouvais être traité ou transporté à l'hôpital immédiatement. Je refuse d'être traité ou transporté à l'hôpital. J'ai été informé des risques auxquels cette décision m'expose. J'assume l'entière responsabilité de ce refus.

Patient/ Substitute decision maker (SDM) – print name and address / Patient/mandataire spécial (MS) – Nom et adresse en lettres moulées

If SDM, relationship to Patient / Si MS, relation avec le patient

Time      Date      Signature of Patient or SDM / Signature du patient ou du MS

I have advised this patient or SDM of the risks to the patient's health that are involved.  
J'ai avisé le patient ou le MS des risques de cette décision pour la santé du patient.

Time      Date      Attending Paramedic Signature

I was witness to the above-mentioned refusal and that the person has been informed of the risks involved.  
J'ai été témoin du refus susmentionné et du fait que la personne a été informée des risques de ce refus.

Time      Date      Non Paramedic Witness Name      Witness/Paramedic 2 Signature  
Nom du témoin autre qu'un ambulancier paramédical      Signature du témoin/d'un 2<sup>e</sup> ambulancier paramédical

# Documentation Review

Student fills section A before submitting. The checker fills section C. The instructor uses section D.

## A. Before you submit (student)

What was the one decision on this call that your chart most needs to explain? Does it explain it?

If you ran this call again, what would you chart differently, and why?

## B. Call summary (fills in from the chart)

Intervals

Vitals trend

These numbers are for debrief, not grading. Interval targets depend on the call and your service. Ask what drove each one, and whether the chart would let someone else work it out.

## C. Check my ACR results (filled by the checker)

## D. Instructor notes

# How this practice ACR works

## What this is

A practice version of the Ontario Ambulance Call Report (form 1881-45) for lab and simulation. It is not a patient record. It behaves like a careful paper chart, with a few extra tools that only work on screen and never print.

## Use Adobe Acrobat Reader

The tools, checks and buttons need Acrobat Reader (free, desktop or iPad). In a browser or Mac Preview you can still type, but nothing will check or calculate. Save often.

## The treatment grid

Vitals go in their columns, and so does a medication: the code, then the dose and unit, then the route. For a procedure, the ACR Manual has you write what was done in the columns next to the code, and the result across the Results columns. The two small boxes in the left margin do that. P writes across the procedure side (Dose/Unit to Temp). R writes across the Results side (Reading/Code to Pain Scale). Tick one or both. For example, 341, then P: "20ga L forearm" and R: "Successful and secured". A medication can be written this way too: P: "160 mg PO", R: "Chewed and swallowed". Untick a box to go back to its columns. If the text runs out of room, tick the same box on the next row and carry on. Page 3 is a continuation page with 26 more rows and extra Remarks. Page numbers update on their own.

## Codes

Pages 4 and 5 list the current Ontario ACR codes, taken from [ontario.ca](http://ontario.ca) (page updated 2026/09/14). Codes are written the way Ontario lists them: 10 for vital signs, and decimal sub-codes where they exist, such as 401.4 for a STEMI notification. The code list changes a few times a year, so check [ontario.ca/page/ambulance-call-report-codes](http://ontario.ca/page/ambulance-call-report-codes) if something looks missing.

## Checks as you type

Dates must be YYYY/MM/DD and times 24-hour (1952 becomes 19:52). Procedure codes are checked against the current code list, doses need a unit, and routes need a route code. Choosing a Primary Problem fills in the Problem Code. Ticking one option clears any option it contradicts.

## Check my ACR

Finds documentation gaps: blank required fields, times out of order, procedures with no time or crew number, medications with no dose, route, or vitals before and after, CNO with no explanation, transfer of care with no receiving person, and places where the chart contradicts itself. Items marked (ODS 4.0) come from the Ontario Ambulance Documentation Standards. It highlights fields in yellow on screen and lists them, then asks questions it can't answer for you. The highlights clear before printing. A clean check means nothing obvious is missing. It doesn't mean the chart is good.

## Triage report

Builds the report you would give at triage from what is on your chart. Say it out loud. If something you would want to tell the triage nurse isn't in the report, it isn't in your chart.

## Corrections

Once a chart is submitted, don't change the original entries. Add an addendum at the end of Remarks, clearly marked as an addendum, with the date and time you added it. This is how the Documentation Standards require corrections on a real call report.

## Submitting

Fill in the reflection on the Documentation Review page and run Check my ACR. Then save the PDF and hand it in the way your instructor asks, or upload it to ACR Review for feedback.

## Printing

Print pages 1 and 2, page 3 if you used it, and page 6 if there was a refusal. Tools, highlights and margin boxes don't print.

## Where the rules come from

Checker items tagged (ODS 4.0) come from the Ontario Ambulance Documentation Standards. Items tagged (ACR Manual) come from the Ambulance Call Report Completion Manual, and most field tooltips quote its instructions for that field. Where the 2017 manual and the current code list disagree (for example special transport codes written 01 or 1, or the newer status codes), the form follows the current [ontario.ca](http://ontario.ca) code list.
